

## Data Collection and Preprocessing Phase

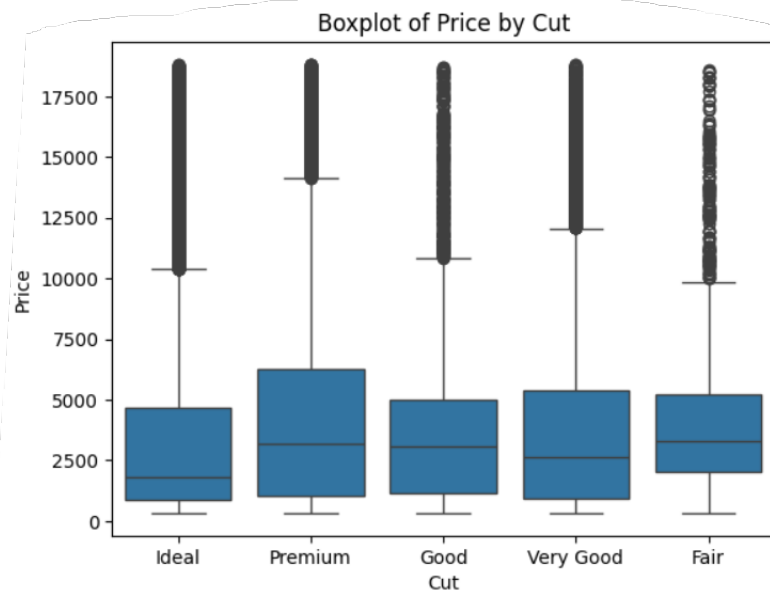

Date	21 June 2024
Team ID	739772
Project Title	Gem Valuation Revolution:Predicting Diamond Prices With Artificial Neural Networks
Maximum Marks	6 Marks

### Data Exploration and Preprocessing Report

Dataset variables will be statistically analyzed to identify patterns and outliers, with Python employed for preprocessing tasks like normalization and feature engineering. Data cleaning will address missing values and outliers, ensuring quality for subsequent analysis and modeling, and forming a strong foundation for insights and predictions.

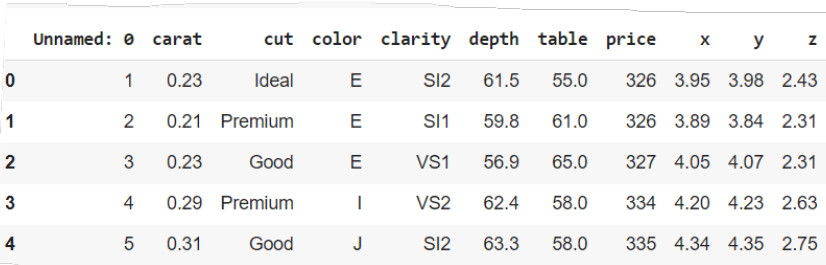

Section	Description
